B.B.A. Computer Information Systems

Bedford High School; Graduated 5/2009
High School Diploma

Languages

PHP, SQL, Javascript / jQuery, C#/ASP.NET, and CSS / SCSS.

Projects

Drupal 7

Kent State University 2018 Redesign

Custom theme built on top of Zurb Foundation. Built components using Paragraphs (and components previously made using Panels, were remade with Paragraphs). Lots of custom JS. Accounted highly for usability/accessibility.

WordPress

The Dead B Scrolls

Custom theme, modules, & functionality including a fun dark-mode. Migrated content from Tumblr, Drupal 7, & WordPress to Drupal 8, and then migrated again back to WordPress.

<https://bjbassett.org/s/d8>

Freedom Fellowship Podcasts

Custom theme, API endpoints, and a plugin that contains custom widgets, layouts, and more. Wrote a plugin to clean the database. Content was full of links to files that needed to be in custom fields, there were "Series" with the same ID and Slug as "Categories" that needed cleaned. All functionality is dynamic and custom. Lots of content, so there are many transients (cache) to increase the website's overall speed. Transients are set within the many API endpoints.

Oswald Nirvana Surety Solutions

Custom theme (built on top of Bootstrap, using WordPress theme Understrap as a base), with custom AJAX/API functionality. Simple, but elegant. Originally built from a mockup that was drawn on paper by hand, later, colors and certain style elements were provided by client based on their print material.

Laravel/VueJS

Bible Typer

An app to type portions of or all of the Bible while also improving your typing speed and accuracy. Worked side-by-side with a back end developer to create this in a single week.

ResumeCMS & Home Base

[The page you are on] is a CMS that I built from scratch that includes a short link generator to track how often users are using the links I provide (whether on my resume, or on Social Media). Clicking print at the top doesn't simply open a print dialog, but dynamically turns this page into a pdf.

How Much?

Uses the ebay API and my own custom API to query through recent sale data to find good prices for the things you are trying to sell in a beautiful way with an option to share results. (Bootstrap, jQuery, lodash, Laravel, Vue JS)
